Projects

- **Radar System**
  Radar sytem using Arduino Uno R3 , italian based open source hardware , 8-bit computer technology.
  It moves it sensors at 360 degree and fires a beep through speakers and displays the distance on computer screen whenever any object blocks its path. It works upto 2 metre distance.
  I submitted this project in BCA final year.

- **Object detection**
  Using Open CV technology, i developed a program which is able to detect and track the object on the basis of its color. I acheived this by HSL color selection.

- **Full Stack Development**
  All front end development languages for students like w3schools. Using HTML CSS JS REACT JS

- **Face detection**
  Open Cv with python helped in developing a program that can detect the face of a person on realtime basis through webcam.

- **Box Office Movie Revenue Collection Prediction**
  In final semester of MCA , i with my project members developed a machine learning model in python that can predict collection of movies in box office.
  We used Random Forest & XG Boosting algorithms which resulted in high accuracy and error of less than 2%.
